

# Super Simple Instructions

**NOTE:** You will need to either create a EULA file or edit the auto-generated file **before** the server will run. See EULA section below.

## LINUX/MacOS

- Open a terminal window and navigate to the directory containing these server files
1. Run `./Install.sh`
  2. Run `./ServerStart.sh`

## WINDOWS

- Open a File Explorer window and navigate to the directory containing these server files

1. Run `Install.bat`
2. Run `ServerStart.bat`

## EULA

1. Create a file named `eula.txt` in the minecraft server directory (the one where you found this README!)
2. Paste in the following into the file:

```
#By changing the setting below to TRUE you are indicating your agreement to  
our EULA (https://account.mojang.com/documents/minecraft\_eula).  
eula=false
```

3. Change the `eula=false` to `eula=true` (I can't agree for you... you have to do this yourself.)
4. Save the file.
5. Follow the instructions above specific to your Operating System.
